

Water Risk Research Report

Locations analysed: 3

Verified data points: 20/31 (65% source-validated)

Fully supported by source: 11/20 (55%)

Multi-source coverage: 9/9 dimensions with ≥ 2 distinct sources

Location: Plant in Mexicali, Mexico

Water Stress - 2 distinct sources

Data: Baja California, the state where Mexicali is located, was classified as a 'water scarcity' region based on per-capita water availability, with several areas inside the state rated 'extremely high water risk' by WRI-Aqueduct.

Source: <https://iwaponline.com/ws/article/21/6/2760/76153/Estimating-the-future-hydric-needs-of-Baja> - Estimating the future hydric needs of Baja California, Mexico. Assessment of scenarios to stop being a region with water scarcity

Excerpt: "According with the National Water Commission of Mexico (EAM 2018), the water availability per capita in BC in 2017 was 849 m3 year⁻¹, which allows it to be classified, using FAO (2014) indicators, as a 'water scarcity' region, and several areas inside BC as 'extremely high water risk' (WRI-AQUEDUCT 2019)."

Validation: **FAILED VALIDATION - source blocked (bot protection)**

Data: Baja California is highlighted as one of the most concerning cases of critical water scarcity in Mexico, within a national context where the majority of the country's territory faces high or very high water stress.

Source: <https://mexicobusiness.news/sustainability/news/water-stress-strategic-risk-business-mexico> - Water Stress: Strategic Risk for Business in Mexico

Excerpt: "Several regions are already experiencing critical levels of water scarcity, particularly in the north and center of the country. One of the most concerning cases is Baja California."

Validation: **MATCH FOUND (exact)**

Claim support: **PARTIAL** - Excerpt supports Baja California as a concerning water scarcity case but does not mention that the majority of Mexico's territory faces high or very high water stress.

Source relevance: 3/5 - Industry news site with topical relevance but limited independent authority on water stress data.

Incidents - 3 distinct sources across 4 articles

Data: A citizen movement (Mexicali Resiste) organized large-scale marches and protests against a planned brewery (Constellation Brands) in Mexicali over its water use, citing that the region was already experiencing severe water scarcity, with local outrage peaking in 2017 when over 12,000 residents took to the streets.

Source:

<https://www.prnewswire.com/news-releases/mexicali-resiste-activist-vs-constellation-brands-activists-demand-water-rights-and-freedom-301417829.html> - Mexicali Resiste Activist VS. Constellation Brands: Activists continue to demand WATER RIGHTS and FREEDOM

Excerpt: "Since January 2017, Mexicali Resiste has opposed the plans by Constellation Brands, a U.S. based alcohol corporation, to build a billion-dollar brewery using local water to import beer for American consumers in a region experiencing severe water"

Validation: **FAILED VALIDATION - source unreachable**

Data: Protesters were subsequently criminalized for their involvement in the 2017 demonstrations, facing charges of 'deprivation of liberty' of police and 'dispossession' of a state building, and continued to face legal proceedings for these charges years later.

Source:

<https://www.prnewswire.com/news-releases/mexicali-resiste-vs-constellation-brands-activists-demand-water-rights-and-freedom-301423490.html> - Mexicali Resiste VS. Constellation Brands: Activists Demand WATER RIGHTS and FREEDOM

Excerpt: "Following the protests, they were charged with "dispossession of state buildings" and "deprivation of liberty of the police.""

Validation: **MATCH FOUND (exact)**

Claim support: **PARTIAL** - Excerpt confirms the specific charges but does not support the claim that protesters continued to face legal proceedings for these charges years later.

Source relevance: 3/5 - Press release from an advocacy group involved in the dispute, useful as primary account but biased and not

independently verified.

Data: The controversy stemmed from social protests unleashed in Mexicali against the brewery project since its announcement, due to concerns over water scarcity, overexploitation of water sources, and lack of transparency about construction of an aqueduct built for the brewery's exclusive use.

Source: https://www.scielo.org.mx/scielo.php?pid=S0187-73722020000100116&script=sci_arttext&tlng=en - Elements of Socio-Environmental Conflict: The Constellation Brands Brewery and Mexicali Water

Excerpt: *"Since the announcement of the intention to build the brewery in Mexicali in April 2015, a series of social protests were unleashed in the municipality against the project itself and the lack of transparency implemented by the state governments' promoters when explaining the use of public resources to construct an aqueduct for the brewery's sole use."*

Validation: MATCH FOUND (exact)

Claim support: PARTIAL - Excerpt supports protests over lack of transparency regarding the aqueduct, but does not mention water scarcity or overexploitation of water sources as stated reasons for the protests.

Source relevance: 5/5 - Peer-reviewed academic source (SciELO) directly analyzing the Mexicali brewery water conflict, highly authoritative and on-topic.

Data: The conflict ultimately led to the cancellation of the US \$1.4 billion Constellation Brands brewery project in Mexicali after a public referendum in which residents cited water scarcity concerns.

Source: <https://mexiconewsdaily.com/water-in-mexico/mexicos-national-water-law-and-industry/> - The facts on industrial water usage in Mexico

Excerpt: *"The LAN's limitations were spotlighted in the 2020 cancellation of a US \$1.4 billion brewery project in Mexicali by U.S.-based Constellation Brands, producers of major export brands such as Cerveza Modelo. The project was halted after a public referendum, with residents citing concerns about water scarcity."*

Validation: MATCH FOUND (exact)

Claim support: YES - Excerpt fully supports the cancellation of the \$1.4B Constellation Brands project after a referendum citing water scarcity concerns.

Source relevance: 4/5 - Established Mexico-focused news outlet with direct, accurate reporting on the referendum and project cancellation.

Regulations - 3 distinct sources

Data: Under Mexico's National Water Law (Ley de Aguas Nacionales, LAN), industrial water use is allocated through concession titles granted by CONAGUA, which assesses water availability before granting permits and will not grant a concession if the site is in an overexploited aquifer; high-water-use industries such as beverages undergo rigorous audits to ensure compliance with recycling and reuse requirements.

Source: <https://mexiconewsdaily.com/water-in-mexico/mexicos-national-water-law-and-industry/> - The facts on industrial water usage in Mexico

Excerpt: *"Under the LAN, water for use in the industrial sector is allocated through concession titles that allow extraction from rivers, lakes, and groundwater."*

Validation: MATCH FOUND (exact)

Claim support: PARTIAL - Excerpt only supports that industrial water use is allocated via concession titles; it does not mention CONAGUA's role, aquifer overexploitation denial, or audits for high-water-use industries.

Source relevance: 3/5 - General news outlet summary of water law, reasonably accurate but not a primary legal/regulatory source.

Data: In December 2025, Mexico's Senate approved a new General Water Law and amendments to the National Water Law that reinforce water as a human right prioritizing personal/domestic consumption over other uses, eliminate the ability to transfer concessions between private parties, and prohibit changing the authorized use of water in a concession (e.g., from agricultural to industrial use).

Source: <https://www.lexology.com/library/detail.aspx?g=737edf8d-f891-4376-ad20-b50f425d1e98> - Mexico Approves New General Water Law and Amends National Water Law - Lexology

Excerpt: *"The Mexican Senate on Dec. 5, 2025, approved the General Water Law (Ley General de Aguas) and amendments to the National Water Law (Ley de Aguas Nacionales), marking a significant shift in the regulatory framework governing water resources in Mexico."*

Validation: FAILED VALIDATION - source blocked (bot protection)

Data: Under the amended LAN, CONAGUA has authority to define key regulatory terms such as 'overexploitation' of water, and in cases of severe drought or overexploitation, the reform permits the state to temporarily reclaim national

water rights from existing industrial concessionaires.

Source: <https://www.whitecase.com/insight-alert/new-water-legislation-creates-risks-investments-mexico> - New water legislation creates risks for investments in Mexico | White & Case LLP

Excerpt: "Risks and uncertainty are heightened by the fact that the reform includes an article allowing Conagua to define the meaning of key terms such as "overexploitation" of water.¹³ - Moreover, in cases of severe droughts, overexploitation and similar states of need or urgency, the reform permits the state to temporarily reclaim national water rights from existing concessionaires.¹⁴"

Validation: FAILED VALIDATION - source blocked (bot protection)

Location: Plant in Monterrey, Mexico

Water Stress - 3 distinct sources

Data: WRI Aqueduct data show Nuevo León (the state where Monterrey is located) is projected to reach a medium-high level of water depletion, between 20% and 40%, by 2030.

Source: <https://mexiconewsdaily.com/news/14-mexican-states-could-face-extreme-water-stress-2030/> - 14 Mexican states could face extreme water stress by 2030

Excerpt: "Additionally, six states - Jalisco, México state, Michoacán, Puebla, Tamaulipas and Tlaxcala - are expected to experience high water depletion, ranging between 40% and 80%, while Nuevo León could reach a medium-high level of depletion, between 20% and 40%."

Validation: MATCH FOUND (exact)

Claim support: PARTIAL - Excerpt does not specify the year 2030 for Nuevo León's projected depletion level.

Source relevance: 4/5 - News outlet accurately reporting WRI Aqueduct projections relevant to Nuevo León.

Data: Mexico is one of just four countries (alongside India, Egypt and Turkey) that will account for over half of global GDP exposed to high water stress by 2050, according to WRI Aqueduct data.

Source: <https://www.wri.org/insights/highest-water-stressed-countries> - 25 Countries, Housing One-Quarter of the Population, Face Extremely High Water Stress

Excerpt: "Just four countries - India, Mexico, Egypt and Turkey - account for over half of the exposed GDP in 2050."

Validation: MATCH FOUND (exact)

Claim support: YES - Excerpt confirms the four countries and the 'over half of exposed GDP' figure for 2050.

Source relevance: 5/5 - Direct WRI Aqueduct source, highly authoritative and topically relevant.

Data: Monterrey came close to a 'Day Zero' water-supply crisis in 2022 and 2023 due to a critical shortage of water, comparable to Cape Town's 2018 crisis.

Source: <https://www.gsd.harvard.edu/2024/02/from-drought-to-flood-solutions-for-extreme-climate-events-in-monterrey-mexico/> - From Drought to Flood: Solutions for Extreme Climate Events in Monterrey, Mexico - Harvard Graduate School of Design

Excerpt: "In 2022 and 2023, Monterrey, Mexico's second largest city, experienced a critical shortage of water and, like Cape Town in 2018, was close to a Day Zero of water provision."

Validation: MATCH FOUND (exact)

Claim support: YES - Excerpt directly supports the Day Zero comparison and timeframe for Monterrey.

Source relevance: 4/5 - Harvard GSD academic article specifically analyzing Monterrey's water crisis.

Incidents - 4 distinct sources

Data: In 2022, Monterrey experienced its worst modern-day water crisis, with a major reservoir (Cerro Prieto) dropping below 1% capacity, causing millions to lose tap-water access and triggering protests, alongside government-imposed water rationing.

Source:

<https://mexiconewsdaily.com/water-in-mexico/mexican-students-turn-water-crisis-into-global-innovation-compete-for-prestigious-sustainability-prize/> - Water Crisis in Monterrey: A Student's Journey - Mexico News Daily

Excerpt: "In 2022, Monterrey experienced its worst modern-day water crisis. A perfect storm of drought, demand and aging infrastructure caused dams to dry up - Cerro Prieto, which long supplied the Monterrey metro area with water, dropped below 1% capacity by July."

Validation: MATCH FOUND (fuzzy 100%)

matched on page: "in 2022, monterrey experienced its worst modern-day water crisis . a perfect storm of drought, demand and aging infrastructure caused dams to dry up - cerro prieto, which long supplied the monterrey metro area with water, dropped below 1% capacity by

july."

Claim support: PARTIAL - Excerpt supports the drought and reservoir capacity drop but omits claims about millions losing tap-water access, protests, and government rationing.

Source relevance: 4/5 - Established Mexico-focused news outlet reporting factual crisis details.

Data: During the 2022 drought, some Monterrey residents joined protests specifically targeting water bottling plants operated by beverage companies, amid anger over corporate water concessions.

Source: <https://www.preventionweb.net/news/taps-run-dry-mexican-drought-fuels-anger-over-water-inequality> - As taps run dry, Mexican drought fuels anger over water inequality

Excerpt: "Noyola said it felt bitterly ironic to have to buy water from a leading drinks firm that extracts water from a well close to his home, and he has joined a number of protests at bottling plants since rationing began earlier this year."

Validation: MATCH FOUND (exact)

Claim support: YES - Excerpt confirms protests at bottling plants amid water rationing anger.

Source relevance: 4/5 - UN-affiliated disaster/risk news aggregator reporting relevant protest details.

Data: The 2022 water crisis in Monterrey sparked widespread upheaval, including residents blocking major highways in protest and people in other parts of Nuevo León setting fire to pipes meant to divert emergency water flows to the city.

Source: <https://mexicodailypost.com/2022/07/23/monterrey-water-crisis-the-city-is-on-an-unsustainable-path/> - Monterrey water crisis: the city is on an unsustainable path - Monterrey Daily Post

Excerpt: "The crisis has sparked widespread upheaval, with frustrated residents blocking major highways in protest and people in other parts of the state setting fire to pipes that were supposed to divert emergency flows to the city."

Validation: MATCH FOUND (exact)

Claim support: YES - Excerpt matches the claim about highway blockades and pipe burnings in other parts of the state.

Source relevance: 3/5 - Lesser-known local news site, moderate reliability but topically on point.

Data: Mexico declared a national drought emergency in 2022, giving authorities special measures to guarantee water supplies, after reservoirs serving Monterrey were depleted and household water was rationed to only a few hours per day.

Source: <https://newsinfo.inquirer.net/1627772/mexico-declares-drought-emergency/amp> - Mexico declares drought emergency

Excerpt: "Authorities in parts of Mexico, including the northern industrial powerhouse of Monterrey, have been forced to ration water use due to depleted reservoirs."

Validation: FAILED VALIDATION - source blocked (bot protection)

Regulations - 5 distinct sources

Data: Industrial water use in Mexico requires a CONAGUA concession, and applications for such concessions must also request any required wastewater discharge permit and permit for works needed to make use of the water, per the federal water law regulation.

Source: https://www.conagua.gob.mx/CONAGUA07/Contenido/Documentos/Repda_1994.pdf - REGLAMENTO DE LA LEY DE AGUAS NACIONALES

Excerpt: "ARTICULO 30.- Conjuntamente con la solicitud de concesión o asignación para la explotación, uso o aprovechamiento de aguas nacionales se solicitará, en su caso: el permiso de descarga de aguas - residuales, el permiso para la realización de las obras que se requieran para el aprovechamiento del - agua y la concesión para la explotación, uso o aprovechamiento de cauces, vasos o zonas federales"

Validation: MATCH FOUND (fuzzy 98%)

matched on page: "promoviente. articulo 30.- conjuntamente con la solicitud de concesión o asignación para la explotación, uso o aprovechamiento de aguas nacionales se solicitará, en su caso: el permiso de descarga de aguas residuales, el p ermiso para la realización de las obras que se requieran para el aprovechamiento del agua y la concesión para la explotación, uso o aprovechamiento de cauces, vasos o zonas federales a"

Claim support: YES - Excerpt (Article 30) matches the described concession/permit application requirements.

Source relevance: 5/5 - Official CONAGUA regulatory document, authoritative and directly on-topic.

Data: Under Mexico's current national water law, any water concession or permit-including for industrial use-must prioritize human and domestic consumption, and CONAGUA can reduce or cancel concessioned volumes if there is risk to water availability for human consumption.

Source: <https://perezmartinez.mx/2026/01/26/el-nuevo-regimen-de-concesiones-de-aguas-nacionales-2026/> - El Nuevo Régimen de Concesiones de Aguas Nacionales (2026) - PM

Excerpt: "La LAN establece en su texto actual que cualquier autorización, permiso, concesión, asignación o prórroga, ahora,

debe priorizar el consumo humano y doméstico. Si existe riesgo para la disponibilidad de agua para consumo humano o doméstico, la CONAGUA puede disminuir o cancelar los volúmenes concesionados."

Validation: MATCH FOUND (exact)

Claim support: YES - Excerpt supports prioritization of human/domestic consumption and CONAGUA's power to reduce or cancel concessions.

Source relevance: 3/5 - Law firm blog with future-dated content, plausible but less verifiable authority.

Data: Mexico's new Ley General de Aguas centralizes in CONAGUA the exclusive authority to grant, supervise, modify, revoke and reassign water concessions and permits, meaning no private company or actor can independently administer national water resources.

Source: <https://lexlatin.com/reportajes/ley-general-de-aguas-mexico-mineria-agroindustria-parques-industriales> - LexLatin | ¿Qué dice la Ley General de Aguas y cómo impacta a la minería, la agroindustria y a los parques industriales en México?

Excerpt: *"Además, la norma centraliza en la Comisión Nacional del Agua (Conagua) la facultad exclusiva para otorgar, supervisar, modificar, revocar y reasignar concesiones y permisos."*

Validation: MATCH FOUND (exact)

Claim support: PARTIAL - Excerpt supports centralization of authority in CONAGUA but does not state that no private company can independently administer water resources.

Source relevance: 4/5 - Legal news outlet covering Mexican water law reform, relevant and fairly authoritative.

Data: NOM-001-SEMARNAT-1996 (updated by NOM-001-SEMARNAT-2021) is the official Mexican standard setting maximum permissible contaminant limits for wastewater discharges into national receiving bodies, and compliance is mandatory for all dischargers, including industrial facilities.

Source:

<https://www.gob.mx/semarnat/prensa/se-publica-nom-001-semarnat-2021-que-establece-limites-de-contaminantes-en-descargas-de-aguas-residuales> - Se publica NOM-001-SEMARNAT-2021, que establece límites de contaminantes en descargas de aguas residuales | SEMARNAT

Excerpt: *"La NOM-001-SEMARNAT-2021 será de observancia obligatoria para los responsables de las descargas de aguas residuales en cualquier tipo de cuerpo receptor propiedad de la Nación y tendrá un cumplimiento y vigencia gradual, establecida en sus artículos transitorios, entrando en vigor a los 365 días naturales posteriores a su publicación en el Diario Oficial de la Federación."*

Validation: FAILED VALIDATION - excerpt not found in source

Data: Nuevo León's state water law establishes that the state, together with municipalities, administers public drinking water and sanitation services, and defines industrial water (potable water for domestic, commercial, service or industrial use) as needing to meet official Mexican standard requirements.

Source: <https://mexico.justia.com/estados/nle/leyes/ley-de-agua-potable-y-saneamiento/> - Ley de Agua Potable y Saneamiento para el Estado de Nuevo Leon [PDF]

Excerpt: *"b) Agua potable: El agua de uso doméstico, comercial, de servicios o industrial que reúne los requisitos establecidos en la norma oficial mexicana."*

Validation: FAILED VALIDATION - source blocked (bot protection)

Location: Factory in Chandler, Arizona, USA

Water Stress - 3 distinct sources

Data: WRI's Aqueduct Water Risk Atlas placed Arizona (the state containing Chandler) in the 'high stress' category for baseline water stress, one tier below the most severe 'extremely high' classification.

Source: <https://www.washingtonpost.com/climate-environment/2019/08/06/mapping-strain-our-water/> - Mapping the strain on our water supply - The Washington Post

Excerpt: *"Neighboring Arizona was among four states in the somewhat-less-perilous "high stress" category."*

Validation: FAILED VALIDATION - source unreachable

Data: Analysis based on the WRI Water Risk Atlas identifies Arizona as a state experiencing high water stress.

Source: <https://watercenter.sas.upenn.edu/splash/water-stress-water-scarcity> - From Water Stress to Water Scarcity | The Water Center at Penn

Excerpt: *"The water stress is high in California, Arizona, Colorado and Nebraska."*

Validation: FAILED VALIDATION - source blocked (bot protection)

Data: Hydrological modeling shows that a water withdrawal rate causing negligible stress on the Missouri River would exceed 100% of physical feasibility on Arizona's Salt River (one of Chandler's primary surface water sources) during drought conditions.

Source: <https://arxiv.org/pdf/2606.21760> - AI Data Centers and the Water Use Feedback Loop

Excerpt: "The same 14 ML/d withdrawal registers as negligible stress (0.05%) on the Missouri River but exceeds physical feasibility at 104% on Arizona's Salt River and 152% on Coyote Creek."

Validation: MATCH FOUND (fuzzy 95%)

matched on page: "facility. the same 14 ml/d withdrawal registers as negligible stress (0.05%) on the missouri river but exceeds physical feasibility at 104% on arizona's salt river and 152% on coyote creek. cumulative analysis reveals phoenix has already"

Claim support: YES - Excerpt directly states the 0.05% Missouri stress and 104% Salt River feasibility figures matching the claim.

Source relevance: 0/5 - Fabricated/invalid arXiv link with future date, not a credible or verifiable hydrology source for this claim.

Incidents - 3 distinct sources

Data: City water officials reported that Chandler's surface water reservoir supplies fell sharply from full capacity to about half within a two-year period, reflecting an emerging regional water supply crisis.

Source:

https://www.chandlernews.com/santan/news/chandler-begins-girding-for-cuts-in-water-supply/article_dfa60e65-258f-4d48-bb04-3bbb7b6aee7c.html - Chandler begins girding for cuts in water supply | News | chandlernews.com

Excerpt: ""We went from reservoirs that are 100%, down to 55% in just two short years.""

Validation: MATCH FOUND (exact)

Claim support: PARTIAL - Excerpt supports the reservoir drop from 100% to 55% in two years, but does not state this reflects an 'emerging regional water supply crisis.'

Source relevance: 3/5 - Local news outlet reporting on Chandler water supply is topically relevant but not a primary authoritative source.

Data: Chandler's mayor joined other city leaders in formally petitioning federal water managers to reconsider proposed Colorado River supply cuts, warning that reductions could harm the region's technology manufacturing sector.

Source: <https://www.kjzz.org/politics/2026-03-10/chandler-expanding-well-system-amid-regionwide-water-drought> - Chandler expanding well system amid regionwide water drought

Excerpt: "Hartke recently co-signed a letter asking federal water managers to reconsider those proposed cuts to Arizona's Colorado River supply. He and other city leaders around the Valley made the case that water reductions could harm the growing technological manufacturing industry in Arizona."

Validation: MATCH FOUND (exact)

Claim support: YES - Excerpt confirms the co-signed letter, request to reconsider cuts, and concern about harming the tech manufacturing industry.

Source relevance: 3/5 - Public radio station (KJZZ) reporting is a credible regional news source directly on-topic, though not a primary government record.

Data: At a Chandler Chamber of Commerce policy event, regional water officials warned of a looming 2026 water crisis, citing an inability to continue relying on the Colorado River as in the past due to a dry winter depleting supplies.

Source:

https://www.queencreektribune.com/news/water-crisis-looming-in-2026-experts-say/article_4a3d3c07-7cfc-4275-b162-5e1a877c5a1b.html - Water crisis looming in 2026, experts say | News | queencreektribune.com

Excerpt: ""We have a major water supply that is about to have major reductions," Tenney said. "We will not be able to rely on the Colorado River as we have in the past.""

Validation: MATCH FOUND (exact)

Claim support: PARTIAL - Excerpt supports warning about Colorado River reliance ending, but does not mention the Chandler Chamber of Commerce event, the year 2026, or a dry winter depleting supplies.

Source relevance: 3/5 - Local newspaper covering a water policy event is relevant but a secondary, moderate-authority source.

Regulations - 3 distinct sources across 4 articles

Data: Arizona's 1980 Groundwater Code established Active Management Areas (AMAs), including the Phoenix AMA that covers Chandler, to regulate groundwater withdrawal by industrial, agricultural, and municipal users.

Source: <https://www.azwater.gov/ama/active-management-area-overview> - Active Management Area Overview | Arizona Department

of Water Resources

Excerpt: "The 1980 Arizona Groundwater Code recognized the need to aggressively manage the state's finite groundwater resources to support the growing economy. Areas with heavy reliance on mined groundwater were identified and designated as Active Management Areas (AMAs). Currently there are eight AMAs (Prescott, Phoenix, Pinal, Tucson, Santa Cruz, Douglas, Willcox, Ranegras Plain) which are subject to regulation pursuant to the Groundwater Code."

Validation: FAILED VALIDATION - source blocked (bot protection)

Data: Arizona's Groundwater Management Act legally regulates groundwater usage within designated Active Management Areas under specific state statutory provisions.

Source: https://www.azleg.gov/legtext/56leg/1R/summary/H.SB1660_051223_HOUSEENGROSSED.DOCX.htm - SB1660 - 561R - House Bill Summary

Excerpt: "The Groundwater Management Act regulates groundwater usage in designated areas of the state called active management areas (AMAs) (A.R.S. §§ 45-401 and 45-411)."

Validation: MATCH FOUND (fuzzy 98%)

matched on page: "the groundwater management act regulates groundwater usage in designated areas of the state called active management areas (amas) (a.r.s. ?? 45-401 and 45-411)."

Claim support: YES - Excerpt matches the claim's description of the Groundwater Management Act and cites the same statutory sections.

Source relevance: 4/5 - Official Arizona legislature site provides authoritative legal text directly relevant to groundwater regulation.

Data: The Phoenix Active Management Area, Arizona's primary groundwater regulatory zone, explicitly includes the city of Chandler within its jurisdiction.

Source: <https://computelaw.blog/real-estate/arizona-ai-data-center-water-supply/> - Arizona groundwater and water supply for AI data centers - Compute Law Blog

Excerpt: "The Phoenix AMA covers most of Maricopa County and extends into Pinal County and encompasses the Phoenix metropolitan area including Phoenix, Mesa, Chandler, Goodyear, Buckeye, Avondale, and Surprise."

Validation: MATCH FOUND (exact)

Claim support: YES - Excerpt explicitly lists Chandler as part of the Phoenix AMA.

Source relevance: 1/5 - A law-focused blog is low-authority despite being topically related to AMA boundaries.

Data: Industrial groundwater users in Arizona's AMAs, which would include a factory in Chandler, are subject to conservation requirements such as prohibitions on single-pass cooling and mandates for low-flow plumbing fixtures.

Source: <https://www.azwater.gov/ama/industrial-program> - Industrial Program | Arizona Department of Water Resources

Excerpt: "Industrial users who use groundwater are subject to the general conservation requirements for all industrial users and may be subject to specific subsector conservation requirements. The general conservation requirements that apply to all industrial users include: avoiding waste and single-pass cooling, using low-flow plumbing fixtures, and using low water use plants for landscaping."

Validation: FAILED VALIDATION - source blocked (bot protection)
